

BAUHOLZ FURNITURE

MATERIAL

At Bauholz design, we only use non-system scaffolding planks from scaffolding constructions in the production of our furniture. These planks are approx. 10 - 30 years old and of timber like spruce or fir trees. The planks are sanded and brushed by hand during the production process before being turned into furniture.

INDIVIDUALITY

All our furniture is specially made to the customer's wishes. We are pleased to take individual dimensions and ideas into account. The individual radiance of the surface and the signs of wear and use in the timber are what give our furniture its unique character and make every single Bauholz design item unique.

DESIGN AND STYLE

Our furniture appeals for its clear lines and puristic design. It goes equally well with modern interiors and rustic settings.

CARE/DURABILITY

Bauholz design furniture is completely untreated and needs no specific care. The furniture is not damaged by moisture or dampness.
